

## Problem

A subarray is ascending if every element is strictly greater than the previous element.

Return the maximum possible sum among all ascending subarrays. Complete the function `maxAscendingSum` that takes the following parameter: `int arr[n]`: an array of positive integers. Returns `int`: the maximum ascending subarray sum.

## Input Format

The first line contains an integer `n`, the number of elements in the array. The second line contains `n` space-separated integers.

## Constraints

$1 \leq n \leq 10^5$   $1 \leq arr[i] \leq 10^4$

## Output Format

Print a single integer representing the maximum ascending subarray sum.

## Sample Input 0

```
5
10 20 30 40 50
```

## Sample Output 0

```
150
```
